Delivering education & training

# Kuwait Ministry of Defence Combined Services Technical School

For six years, TQ worked in partnership with the Kuwait Ministry of Defence to run its Combined Services Technical School.

## THE TRAINING REQUIREMENT

The Kuwait Ministry of Defence had a requirement for the provision of equipment for the Technical School's workshops and laboratories, as well as the training of maintenance staff to look after the equipment. This requirement led to the letting of an educational management contract, involving the provision of delivery and support staff.

## THE TQ PROGRAMME

For the initial requirement, TQ specified, supplied and installed all equipment and furniture for the workshops and laboratories; trained maintenance engineers and storekeepers to ensure efficient running of the training facilities; prepared all curriculum materials; and specified and supplied 4 years' worth of materials to enable the trainees to complete their technical training exercises.

The subsequent contract involved curriculum development and delivery of foundation level training in mathematics, science, engineering drawing, English, computer science and workshop technology; followed by trade specialisation courses in technical subjects.

## MEASURING SUCCESS:

Under the guidance of the TQ management team in Kuwait and the UK, the Technical School gained approval as a BTEC (Edexcel) Centre and also gained ISO 9001 certification.
