Delivering education & training

# Saudi Petroleum Services Polytechnic (SPSP)

TQ has the contract to provide the full-range of educational, vocational training and support activities to the SPSP in Dammam, Saudi Arabia for five years.

## THE TRAINING REQUIREMENT

SPSP was founded to provide unique, independent training solutions to the Petroleum Services Sector, with the flexibility to quickly react and adapt to meet their customers' requirements. The Founding Partners of the SPSP (the Ministry of Petroleum and Mineral Resources, Technical and Vocational Training Corporation (TVTC), and Saudi Arabian Chevron) have a requirement for a training provider to develop and deliver the curriculum, and then arrange internationally recognised accreditation.

## THE TQ PROGRAMME

The training that is delivered at the SPSP runs over two years; the first year covers English language and Key Skills and the second year is the technical programme of an NVQ in Performing Engineering Operations followed by a specialisation in Mechanical Maintenance, Electrical Maintenance or Drilling Operations. TQ developed and now delivers the curriculum for all of this training, and has arranged accreditation with both City & Guilds and PAAIVQ-SET.

## MEASURING SUCCESS

The first intake of students have successfully completed their NVQ Level 2 Specialised Award qualification and are well on their way to completing their Level 3 portfolios ready for assessment later in the year.
